

Penn Valley Constructors, Inc.

The Pexco Story

Our company has strategically evolved for almost 50 years from small, custom plastic extrusion manufacturing to a worldwide specialty plastic developer and manufacturer.

Over time, each addition to our family has brought unique capabilities and applications, each that Pexco today shapes the needs of the industry across quite a diverse set of products and markets.

Pexco's Extrusion and Engineering Center of Excellence (ECO) was designed and built to showcase an array of Pexco's products. The ECO features 12 light fixtures that detail a variety of Pexco lenses, a display wall showcasing products used in medical, defense, lighting, filtration and industrial markets. Three display monitors provide visitors an in-depth glimpse into Pexco's world of extrusion.

The entire room is managed by iPad through a Crestron control system.
